COMMON RAIL DIESEL PUMPS

For Light and Medium Duty Commercial Vehicles

Explore our technologies

DFP4

DFP4 is a versatile and robust high pressure diesel common rail pump family that can be remotely mounted on engine for light and medium duty commercial vehicle markets.

Features

- Two plunger fuel lubricated pump
- Slipper tappet drivetrain
- Capable to run with inward or outward thrust loads

Design Features

- Versatility of design features to address worldwide on highway and off highway medium duty applications
- Optional mechanical transfer pump (positive displacement transfer pump for efficient low speed fuel transfer (cranking))
- Tapered shaft adaptable for gear, chain, belt or Oldham drive arrangement

Performance

- High speed operation up to 2,200bar system pressure
- Proven robustness to worldwide fuels

Benefits

- Proven production core pump design, in production since 2005
- Durable upto 750,000km
